## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-28 and 41-56, drawn to channel selection between a license spectrum and an unlicensed spectrum, classified in class 370, subclass 329; or class 455, subclass 450.
- II. Claims 29-40, drawn to a spectrum selector, classified in class 455, subclass 188.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination evidence claims 1-28 and 41-56 do not set forth the details of the subcombination in the invention II, which discloses the structure of the spectrum selector. The subcombination has separate utility such as elements 108, 110 and 302.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
